

P2500

Balanced Performance

High Performance

Ultra High Performance

P2500 Euro is designed as a replacement tyre for medium powered cars. With its M+S marking (Mud and Snow) is the ideal choice, providing all season performances and comfort. The directional tread design comprises deep, wide longitudinal channels and "chevron" pattern grooves, forming shaped multi-siped blocks. These features, together with a silica based tread compound react in unison or individually, not only to ensure excellent grip in the wet and at low temperatures - even with a light covering of snow - but to make P2500 Euro an environmentally friendly tyre. Complementing the functional aspects, the directional pattern and striking sidewall design make it ideal for adding that personal touch.
